

CLAIMS:

1. An electronic device comprising a housing formed by at least two housing parts one of which, called screen part, is integral with a retractable screen which may occupy a first position called closed position and a second position called open position relative to a part called fixed part, characterized in that in the position called closed position, the fixed part partly masks the screen.

2. An electronic device as claimed in claim 1, characterized in that said screen part is mounted on projections so as to permit it being displaced.

3. An electronic device as claimed in claim 1 or 2, characterized in that "hard points" are provided when said screen part is displaced, so that it can occupy stable positions.

4. An electronic device as claimed in one of the claims 1 to 3, characterized in that a guide is provided having recesses which are integral with one of said guiding parts in which can be accommodated during the displacement a spring system which is integral with the other part so as to create said "hard points".

5. An electronic device as claimed in claim 1, characterized in that the positions of the screen between two positions are ensured by latches that can be unlocked by a button.

6. An electronic device as claimed in claim 5, characterized in that the latches permit to separate the two parts of the housing.
